

## DOES EVERYTHING ADD UP?

Help Whole Note Harry figure out the answer by adding up the total value of the notes. Fill in the blanks with the correct numbers, then do the math.

$$\textcircled{O} = 4 \quad \textcircled{J} = 2$$

$$\textcircled{\bullet} = 1$$

**EXAMPLE:**

$$\textcircled{J} (2) + \textcircled{\bullet} (1) = \underline{3}$$

a.  $\textcircled{O} (\underline{\hspace{1cm}}) + \textcircled{\bullet} (\underline{\hspace{1cm}}) = \boxed{\hspace{1cm}}$

b.  $\textcircled{O} (\underline{\hspace{1cm}}) + \textcircled{J} (\underline{\hspace{1cm}}) = \boxed{\hspace{1cm}}$

c.  $\textcircled{O} (\underline{\hspace{1cm}}) + \textcircled{O} (\underline{\hspace{1cm}}) = \boxed{\hspace{1cm}}$

d.  $\textcircled{O} (\underline{\hspace{1cm}}) + \textcircled{O} (\underline{\hspace{1cm}}) + \textcircled{J} (\underline{\hspace{1cm}}) = \boxed{\hspace{1cm}}$

e.  $\textcircled{O} (\underline{\hspace{1cm}}) + \textcircled{O} (\underline{\hspace{1cm}}) + \textcircled{\bullet} (\underline{\hspace{1cm}}) = \boxed{\hspace{1cm}}$

f.  $\textcircled{O} (\underline{\hspace{1cm}}) + \textcircled{J} (\underline{\hspace{1cm}}) + \textcircled{J} (\underline{\hspace{1cm}}) = \boxed{\hspace{1cm}}$

g.  $\textcircled{O} (\underline{\hspace{1cm}}) + \textcircled{J} (\underline{\hspace{1cm}}) + \textcircled{\bullet} (\underline{\hspace{1cm}}) = \boxed{\hspace{1cm}}$

h.  $\textcircled{O} (\underline{\hspace{1cm}}) + \textcircled{\bullet} (\underline{\hspace{1cm}}) + \textcircled{\bullet} (\underline{\hspace{1cm}}) = \boxed{\hspace{1cm}}$

i.  $\textcircled{J} (\underline{\hspace{1cm}}) + \textcircled{J} (\underline{\hspace{1cm}}) + \textcircled{J} (\underline{\hspace{1cm}}) = \boxed{\hspace{1cm}}$

j.  $\textcircled{J} (\underline{\hspace{1cm}}) + \textcircled{J} (\underline{\hspace{1cm}}) + \textcircled{\bullet} (\underline{\hspace{1cm}}) = \boxed{\hspace{1cm}}$
